Baker AWA-II Tester

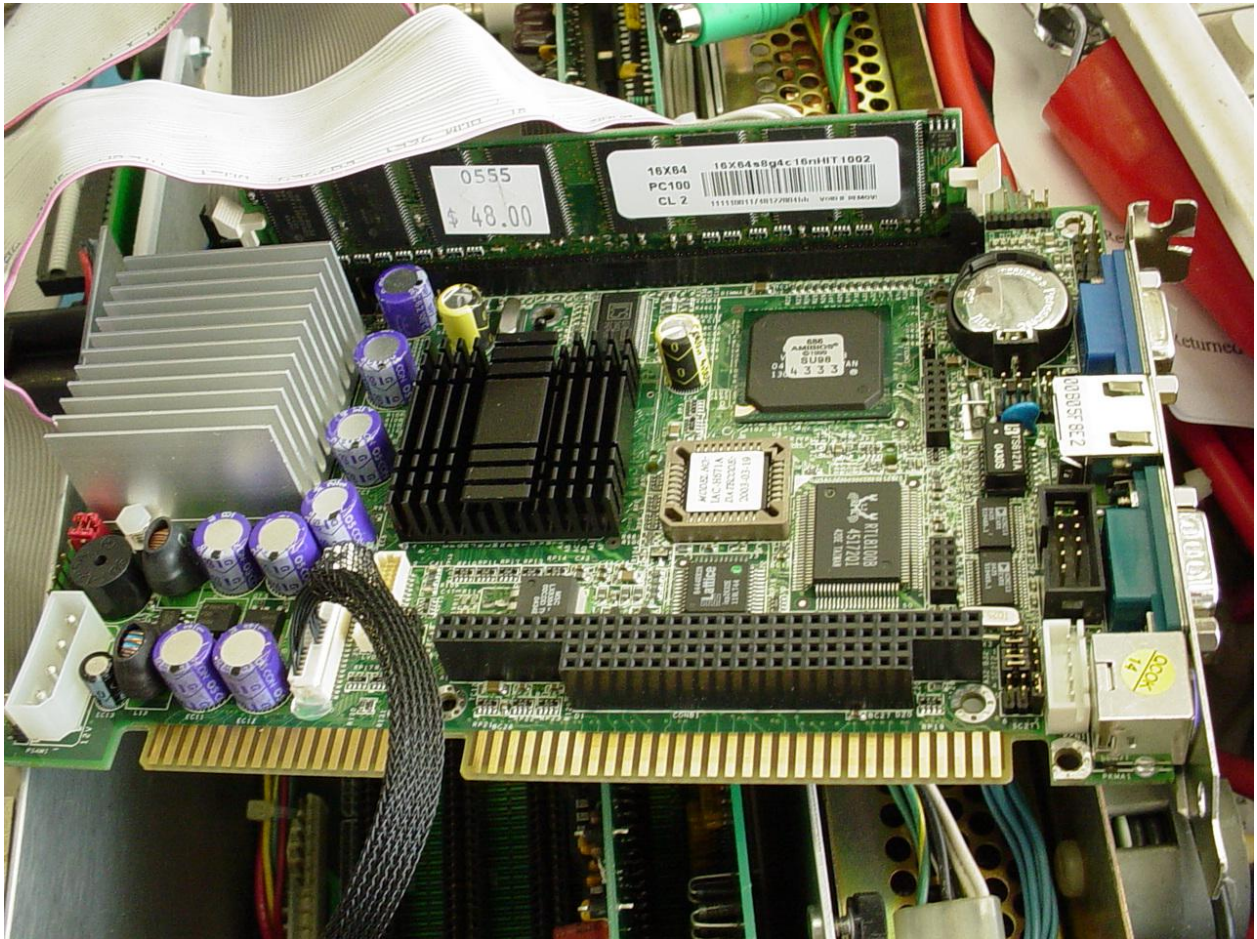

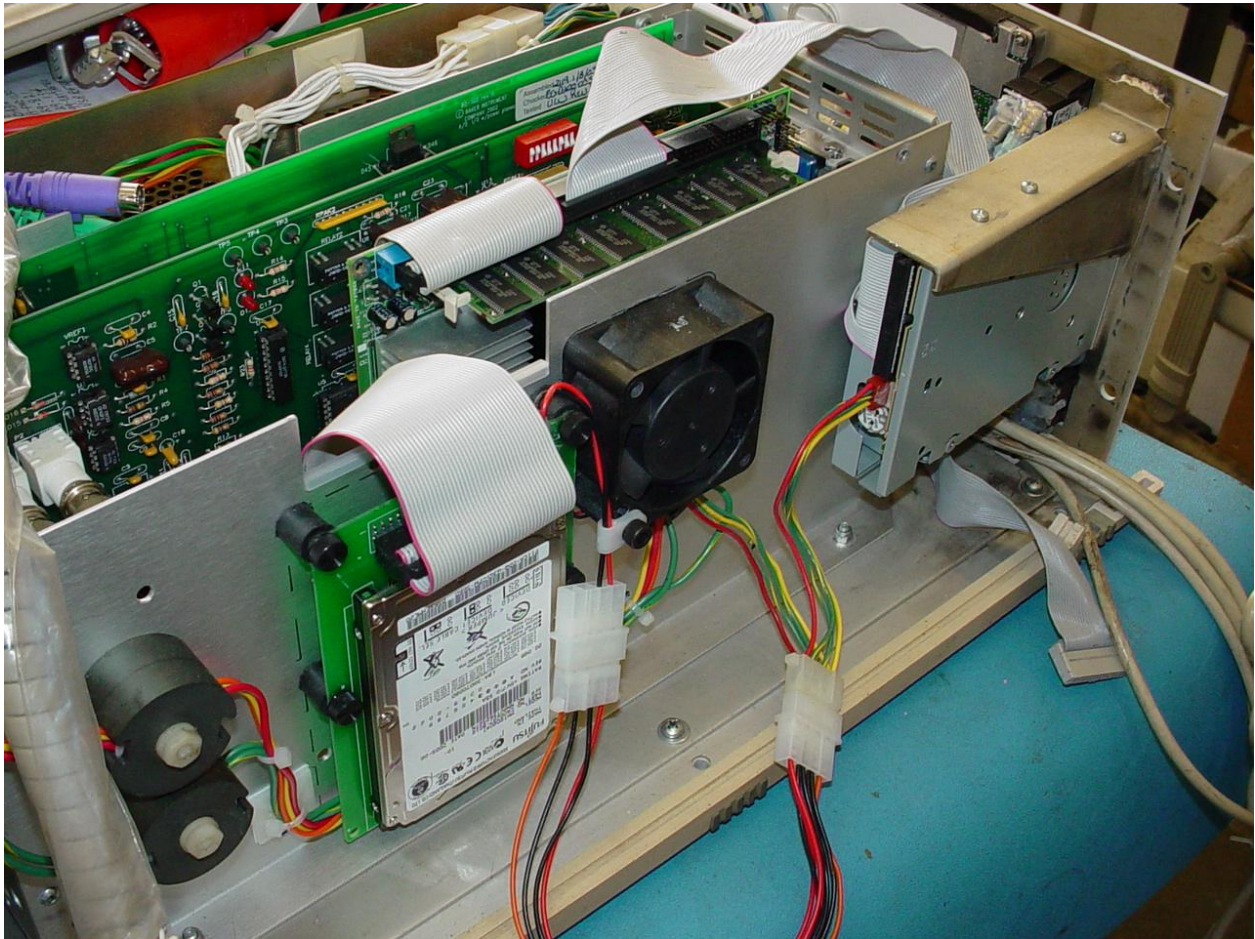

This was an old AWA-II that I upgraded back in 2004 It originally shipped with win N/T OS and I installed a new faster motherboard, windows 2000 with new USB & CAT-5 ports.

New motherboard AWA-II

With this new SBC I was able to eliminate the old VGA to TFT card
configuring the new TFT connection directly from the SBC.

New 40 Gig HD AWA-II

Because some of the old full sized IDE Hard Drives were getting broken heads when the operators would tip the testers over, I had a mounting plate adaptor built for the much more durable mobile laptop drive. Than I would install the whole assembly on shock mounts.
