

Bathroom Remodel at the old Doubletree House

Had to tear out the cracked tile and dripping plumbing

A build-up Mold & Mildew Had a bad odor when I opened the wall. So I ripped out all the rotted moldy stuff.

The studs in the wall around the window were rotted and the wall would need to be rebuilt.

Going with glass block windows when I rebuilt the wall would mitigate the water getting in the wall.

Time for the new plumbing

**I went with the one piece unit that had to go in through the wall
In the upstairs closet.**

Next the walls and the trim

Done
