

The Shed Project

This is the 12 X 14 Shed to be my wood working shop

I put in a trench from a new sub box in the garage to the Shed

The 2 ½ seal tight has 6 12-AWG for the 120 Volt supply

Also 1 8-AWG for conductor for the 240 Volt

The dogs thought I was digging for chipmunks

The small box just under the circuit breaker sub box is for communications. Phone/CAT-5 and Intercom

I also tied in for three way switches in the shed and the garage for eve lights

Completed the fall of 2012
